SAGE 50 to SAGE 200 UPGRADE

Lift your business to the next level

Paradise
I.T. For Business

Sage Business Partner

Are you outgrowing Sage 50?

As your business grows, you will face new challenges such as an increasing number of transactions and more complicated business processes. As a result, more Sage 50 customers are making the move to Sage 200.

Key signs you may be outgrowing Sage 50:

- You experience software instability and repeated episodes of data corruption
- You're experiencing performance degradation due to an increased number of users and higher volume of transactions
- Your business processes have transformed and are difficult to manage with Sage 50 software
- You need to connect with an industry-specific solution you currently use
- You require more sophisticated stock handling capabilities, including multiple warehouses, bin locations and batch / serial traceability
- You need refined management reporting - fast, flexible and delivered to desktops on demand

Sage offers software to suit everyone, and many of our customers stick with us throughout that growth journey. This means we're in a great position to help businesses identify when it's time to take your software up a level.

.:ıl Paradise

Here's why you need Sage 200

Is Sage 50 holding you back?

If you're still using software designed for a smaller business, it can limit your financial visibility, slow down your decision making, create bottlenecks and add to your workload.

With on-demand insight into your finances through four key ledgers; sales, purchasing, nominal and cashbook, Sage 200 allows you to keep control of your business finances, anytime, anywhere.

How Sage 200 can help:

Flexible nominal code structures: Set up departments and cost centres as well as Profit & Loss, balance sheet and cash flow reporting.

Flexible accounting periods: Gain greater control over your accounting periods, with up to 20 accounting periods - open, close and re-open as needed.

Multi-currency functionality: Manage all your foreign currency trading with ease, including exchange rate changes and their impact on business finances across all ledgers and cash book.

Fixed assets: Record assets and manage depreciation with either straight line or reducing balance methods.

Batch upload data: Enter a batch of journals and place transactions on hold for authorisation, before committing them to the Nominal Ledger.

Interactive dashboards: For sales, purchases, sales orders and financials, summarise financial data in visual and easy-to-understand ways so decision-making is easy – and problems can be spotted early.

Enhanced stock control: Featuring multi-warehouse capability and bin locations. Also offers full stock traceability using Batch and Serial numbers.

Propel growth to the next level

Unlock a new level of productivity

Sage 200 gives you unprecedented control of all your business' key operations, empowering you to keep your edge and drive forward at pace:

- Sage 200 runs smarter and faster, using the industry standard SQL database
- Do business with confidence - powerful stock control is fully integrated with Invoicing, Sales Orders and Purchase Orders. This means information about your stock item levels and values are updated at each stage of the sales and purchase processes
- Break down your silos - Sage 200 allows up to 50 users to use the software simultaneously without record locking (except when changing basic settings)
- Flexible and sophisticated management reporting using a range of reporting tools to suit your business including Excel, Power BI and SRSS
- Enhance productivity - Interface to other software including banking, production control and warehouse management. Also communication with customer and supplier IT using EDI

Reduce complexities and increase efficiencies

By upgrading to Sage 200, you can reduce complexities and increase efficiencies, all while using a software that compliments your business growth. Our software is always up to date with the latest legislation changes ensuring your business is compliant.

Take control with Sage 200

## Obtain complete oversight of your production processes

The bigger your business grows, the more complex it is to manage the back-end processes. Higher order levels, additional suppliers and increased inventory to coordinate can prove to be a real headache to manage.

With Sage 200 you get a complete inventory and warehouse management solution to help you optimise stock levels, keep costs down and deliver what your customers want.

- **Easily control and track stock:** Pinpoint where products come from, where they are now, when they were sold and at what price. Control stock items by serial or batch number and monitor stock movements and traceability. Improve efficiency and maintain budget control by keeping track of internal stock movements.
- **Effectively manage suppliers:** Get the best deals for each item by recording price history, lead time, part reference and purchase history.
- **Manage multiple locations:** Manage each location independently for things like replenishment, sales, reporting and stock takes. Realign stock levels quickly and accurately and gain a complete view of the stock held across your business.

Time to upgrade from Sage 50 to Sage 200?

Discover more about Sage 200 today. **Call 01604 655900** for an informal chat about your options.

> The key factor for me running the business and overseeing everything is that cash is king, which means that understanding what stock we hold is absolutely critical. Before, we just didn't have a handle on stock control. Now we do.

Sage Business Partner

"RUN A SMARTER, FASTER, MORE CONNECTED BUSINESS WITH SAGE 200."

Keeping ahead of the competition

Digital advances are changing the modern workplace. Any company not paying close attention to the benefits of moving to an agile ERP solution will inevitably be left behind.

Communicating with other software

Sage 200 is ideal to support continued business growth. As well as a comprehensive library of specialist add-ons, Sage's flexibility allows for new connections to be developed quickly and easily to facilitate communication with customer and supplier systems, including product lists, pricelists and stock availability. With seamless, fast, robust communication, our developers can connect Sage 200 to your own and third-party websites.

Your Local Sage Partner

Over 35 years of specialist Sage 200 support

Since 1987 Paradise Computing has been installing and supporting Sage software solutions for a wide range of industry sectors. With a dedicated in-house Sage Support Team on hand to ensure you receive the best customer care and advice, we take time to understand your individual business needs and use our experience to provide personalised advice.

Guiding you through your exciting growth transition

Partnering with us ensures migrating from Sage 50 to Sage 200 couldn't be simpler.

We know how reassuring it is for you to see your financial reports, such as P&L and VAT returns, in Sage 200 before your changeover is scheduled. We prepare your test copy of Sage 200 to inspect prior to go-live. Here you will see all your Sage 50 data, including customers, suppliers, transactions and bank accounts - right down to the audit trail.

With Paradise you can expect knowledgeable and friendly advice to ensure a smooth migration.

Access to third party products

As well as a comprehensive number of Sage's own products, Paradise offers a vast range of Sage 200 add-ons from our partners, such as Draycir and Sicon. We provide high-quality industry-specific solutions that tackle business challenges and simplify complex tasks.

In-house software development

If you need something special, our creative Sage and Microsoft development team build powerful, complex, yet user friendly software solutions tailored to fit your exacting business requirements, whether you are a small business or a multinational enterprise.

We have extensive experience of website integration, logistics links, bespoke management reporting and a wide range of adaptations from modest custom solutions through to entire bespoke modules.

Cloud Hosting

Deploying your business software in the cloud provides secure access to your data from wherever you are. By re-architecting how you work, you can transform your workplace environment, creating a resilient business model ready for future challenges. Imagine a business without boundaries!

Get ready for bigger and better things.
