CUSTOMER CASE STUDY

ERP Solutions & IT Services: featuring Projects & Microsoft Azure

The Challenge

Step on Safety Ltd designs, builds, and installs GRP anti-slip access solutions across multiple industries. When Paradise was introduced to the business, they were relying on Sage 50 for accounts with minimal stock control and a patchwork of spreadsheets and offline systems. With plans to grow and relocate to new premises, Step on Safety recognised that their existing setup could no longer support their operational needs.

The Solution

Paradise implemented a full Sage 200 ERP solution, hosted on a Microsoft Azure private cloud platform. In addition to managing Step on Safety's Microsoft Office licensing and providing ongoing IT support, we delivered a robust stock control system and the Sicon construction suite add-on for managing applications, retentions, CITB, CIS, RCT and project accounting.

Step on Safety streamlined key processes and accelerated daily operations. Improved stock accuracy and simplified reporting enhanced both internal efficiency and the customer experience.

Now hosted on a Paradise-managed Microsoft Azure platform with dedicated helpdesk support, Step on Safety can fully outsource its IT infrastructure and focus on growing the business.

Industry

Step on Safety Ltd operates in the composite access solutions industry, specialising in GRP (Glass Reinforced Plastic) anti-slip structures. Their services include the design, fabrication, and installation of GRP-based access solutions such as walkways, platforms, stairs, ladders, and handrails.
